

Facial Surveillance for Government

Watchlist integration, identity checks, face-based searching, and face alerts.

Facial Surveillance gives Government:

Watchlist Integration — Users can import up to thousands of face images from databases and centrally create and manage watchlists

Automated alerts— Set alerts associated with specific people with automated triggers that set off alarms or trigger immediate notification via email, SMS, or text.

Face-based searches— Instantly search for a particular person across even large, distributed networks. Tunable face recognition also enables searches for similar faces to help break through disguises.

Instant identity checks— Instantly check any identification picture against a watchlist or database of face images, from the office or the field.

Enterprise Deployments

- **Integrate multiple, distributed watchlists:** Search and alert against databases of thousands of watchlist suspects from anywhere.
- **Identity Solutions:** Check identification against a central database from anywhere in the world.
- **Smart Cameras:** Use 3VR's award-winning facial recognition at the edge of enterprise surveillance deployments to reduce bandwidth requirements.
- **Import and Export face images:** Users can import or export images to and from a central database from anywhere.
- **Mobile units:** Users can access the system remotely from a laptop or handheld device to conduct instant face searches.

Sample enterprise deployment

SmartRecorder™ Deployments

- **Face Similarity Search:** Investigators can use 3VR's patented Face Similarity Search to identify and track thieves, building cases across locations.
- **Federated Face Search:** 3VR's facial recognition technology and investigative search engine enable searches for specific faces and events across the enterprise.
- **Face Alerts:** Set and automate alerts across the enterprise to trigger notification to 3VR OpCenter, email, mobile devices and more.
- **Central Case Management:** Store images and suspect information centrally for multiple years, and access or export case data to email, handheld, PC or CD.
